"We would like to point out to the existence of a German patent DE 1 992 125 C5 affecting the usage of bivalent 4-way valves in liquid circulation heating systems. In this patent the usage of a 4-way bivalent valve in a type of heating system is protected, in which the heating circuit is operated in a regulated manner with a primary heat source and a secondary heat source. The valve is utilized as an alternative secondary heat source for the floor heating. Such a utilization of our bivalent 4-way valve without approval of the patent holder is forbidden. All other applications of our product group VRB are without restrictions possible."
